Product Name: iPhotoMEASURE
First Retail Availability: September, 2006
MSRP: \$95.00

Product Description

iPhotoMEASURE software delivers accurate and efficient measurement by simply taking a picture with a digital camera. Builders and contractors can collect all the measurements they need: when multiple measurements must be taken and shared, or when physical measurements are difficult or unsafe to perform, or when they can't be present to make the measurements.

Who Cares?

Home Do It Yourselfers, Contractors, Landscapers, Interior Designers, Property & Casualty Evaluation, Investigation, Forensics and Law Enforcement.

Why Bother?

Contractors can receive job-site photos by email, saving time spent in traffic and money spent on gas, enabling them to make measurements in the comfort of their office that can be organized and archived for future reference.
