PalmSecure™

Product Description

Product Name: PalmSecure™
Model Number: FAT13M1S1
Suggested Retail Price: N/A
Product Dimensions: 35mm x 35mm x 27mm
Product Weight: Approx. 50g
Date First Commercially Available: July 10, 2006

Product Explanation

Utilizing the latest in biometric security technology, the PalmSecure™ authentication system works by capturing a person's vein pattern image while radiating it with near-infrared rays. The second generation sensor is 1/4 the size of its predecessor, thus providing greater flexibility and ease of implementation in a variety of applications. In addition, the Fujitsu PalmSecure sensor now features a dramatically faster authentication rate, with verification time now reduced to about half the time of the original product. The PalmSecure device is extremely accurate, applicable to virtually all users due to minimal impact from external factors (abrasions, dry skin, chemical damage, etc.), and with its contactless authentication is both hygienic and non-intrusive.

Who cares? As identity theft continues to establish itself as one of the most pressing problems in today's society, people are more concerned than ever about protecting themselves and their assets.

Why bother? The biometric industry will continue to experience dramatic growth in the coming years, and PalmSecure will serve as a critical part of that market by offering a highly reliable and easy to use biometric security solution for consumers and the enterprise.
