### Product Description

Tired of walking to the window to use your cell phone or PDA? 3G speeds not exactly what you expected in the home office? The Z1900 intelligent wireless cellular booster from Spotwave seamlessly brings outdoor wireless signals inside homes and small workspaces. Consumers can get crystal clear call quality, increased data throughput rates, and improved battery life — important factors for millions of people who depend on, and invest in, wireless devices and technology.

### Who Cares?

Since wireless communication has become a way of life and consumers invest considerable amounts of money in the latest wireless gadgets to make their lives easier, they care a lot when these devices don't work at work and at home — where they're used the most.

### Why Bother?

Using patented technology from Spotwave's commercial products, Z1900 is the only network-protecting, intelligent coverage system available for the consumer market — now consumers can take control of their own coverage and do all the things they want to do wirelessly, maybe even cut the cord on the landline.
