## Firewall/Gigabit Router with Secure Extended Range Wireless Technology

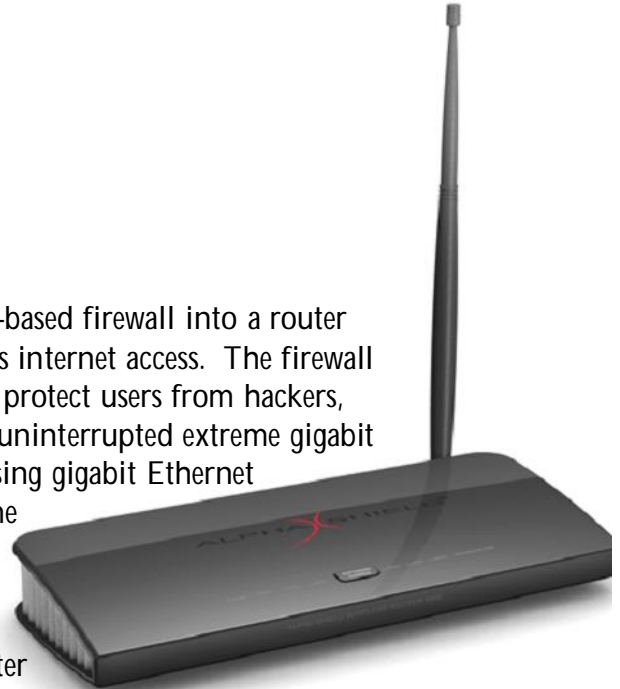

www.alphashield.com  
CES Sands Booth 71722

**Product Name:** AlphaShield 8800

**Retail Availability:** January, 2007

**End-User Pricing:** \$249 (US)

**Product Description:** The AS-8800 integrates a hardware-based firewall into a router offering users both Gigabit wired and extended range wireless internet access. The firewall features fully configured SPI and AlphaGAP technologies to protect users from hackers, viruses and worms without ever loading software. Ensuring uninterrupted extreme gigabit wired Internet access speeds, the AS-8800 features 5 auto sensing gigabit Ethernet ports capable of sustaining high data throughput for real-time applications. As a wireless router, the AS-8800 extends the users Wi-Fi access using AlphaShield's Power-G wireless boosting technology, extending signal reach to as much as 1200 feet indoors or up to 3900 feet outdoors. Beyond greater distances, this technology also increases data pipelines up to 108Mbps, while boosting signal penetration capabilities to achieve a solid Wi-Fi signal even through concrete walls, ensuring uninterrupted Internet access. The AS-8800 also supports VPN, providing a secure tunnel over the Internet to connect remote offices or users to their company's network, making each connection secure and indecipherable between the two end points of the network.

**Who Cares?** Gamers, home users, SOHOs and businesses who want stronger connectivity, faster access, broader Wi-Fi reach and greater security from their wireless Internet connection.

**Why Bother?** Secure high-speed Wi-Fi Internet access within a 1.2 million square foot coverage area with no dead spots -- for under \$250.
