Product name:

Avega AON™ Wi-Fi Loudspeaker System and Technology Platform

First retail availability: Mid 2007 from recognized OEM brands.

Press info (incl. images): www.avegasystems.com/information.htm

Product description:

The AON™ Wi-Fi Loudspeaker System and Technology Platform from Avega Systems Inc is the world's first comprehensive Wi-Fi audio product platform. The system provides wireless access to music from the PC or media server, games consoles and Wi-Fi enabled cell phones and wireless audio distribution from CD/DVD players and portable media players.

It eliminates the need for traditional home theater components like AV receivers and media adapters by integrating, for the first time, audio signal processing including surround decoding, amplification and CD/DVD/portable audio player (including iPod) and 802.11 connectivity, directly into a single module. Avega is offering the AON™ technology module and software to established OEM partners. The platform includes all software and hardware required to build complete products, including Wi-Fi speakers, iPod™ docks, STBs and A/V receivers with Wi-Fi audio connectivity as well as Wi-Fi hand-held controllers and PC control software. A number of products from recognized brands will be appearing in 2007. On the right are shown an example turn-key Wi-Fi loudspeaker integrated with Avega's AON module, Avega's control GUI screenshot and the AON module.

Who cares?

Reliable, low-latency audio distribution over Wi-Fi, particularly for real-time gaming and DVD playback, is extremely difficult and we've solved these problems which is why some of the largest audio brands are excited about the opportunity to work with Avega.

Why Bother?

In every respect, the AON™ platform from Avega Systems raises the concept of Wi-Fi-enabled entertainment devices to a completely new level – nothing else comes close.
